HOW TO

THE CROWN HAS TWO POSITIONS THAT IT CAN BE PUSHED INTO

1. POSITION: WIND

When the crown is pushed all the way in, rotate it clockwise to wind and activate the automatic watch movement.

2. POSITION: TIMESETTING

IMPORTANT

To ensure optimal timekeeping, wind the watch 10-15 times upon receipt and wear it, keeping the watch in motion. If the watch is left idle for a day, it should be wound again. Continuous operation of the watch is preferred for the best results.

PLEASE DON'T WIND THE CROWN MORE THAN 15 TURNS.

Overwinding may cause damage to the mechanism, potentially leading to a malfunction of the power reserve.
